Marisol Salcido

Staff Supply Chain Manager, Global Sourcing & Commodity Strategy

Phoenix, AZ · (555) 068-3417 · marisol.salcido@example.com · linkedin.com/in/example-marisolsalcido

KEY TECHNICAL IMPACT

- **Commodity Strategy & Negotiation:** Own the $182M power-electronics category across 23 suppliers; personally closed a sole-source +9.5% ask at −3.0% — $648K/yr savings plus $2.05M/yr avoided.
- **Supplier Relationship Management:** Ran the supplier side of a sole-source capacitor field-failure crisis — $1.21M cost recovery (63%), quarterly-audit probation, second source qualified in 7 months.
- **Cross-Functional & Program Leadership:** Aligned engineering, quality, finance and planning through the 2021–22 shortage — $148M revenue shipped on schedule — and ran 14 S&OP cycles (accuracy 58% → 74%).

PROFESSIONAL EXPERIENCE

Verdillo Power Systems May 2019 – Present

Commodity Manager, Electronic Components → Senior Strategic Sourcing Lead, Power Electronics Tempe, AZ

Industrial UPS and power-conversion systems for commercial battery storage — $1.2B revenue, $640M spend; plants in AZ and Mexico.

- Own sourcing strategy for power semiconductors, magnetics and film capacitors — $182M spend, 23 suppliers across the US, Mexico, Europe and Asia — personally leading RFQs, deep-dive cost analysis, negotiations and contracts.
- Built a bottom-up should-cost model of the component manufacturing process — copper on the contract's trailing index, core quotes from two core makers, winding minutes, plant-visit labor rates, scrap, overhead and margin.
- Closed the sole-source magnetics renewal (+9.5% ask on $21.6M/yr) at −3.0%: $648K/yr finance-validated savings plus $2.05M/yr avoided, with a copper index clause, 2-year terms, ±20% quantity flex and a pre-agreed walk-away.
- Reused the cost-model structure for film-capacitor (2024) and busbar (2025) negotiations; it anchors the 2027 magnetics renewal.
- Led the supplier side of a sole-source capacitor field-failure crisis — a film change ran hotter and aged faster under ripple current: 9-day restart on date-code traceability, daily VP-of-Operations calls, $1.21M of $1.93M recovered.
- Qualified a second film-capacitor source from a 3-supplier RFQ with supplier quality engineering in 7 months — thermal cycling and a 2,000-hour life test at rated temperature/ripple current, first-article inspection, 500-unit trial lot.
- Negotiated 2025–2026 IGBT power-module agreements with ±25% quantity flex at 90 days' notice for ≈2% on price, and invoked the flex in 2025 to cut a third-quarter order 18% when a customer project slipped.
- Reviewed 214 single-source parts with engineering (37 critical; 26 now with qualified alternates), sub-tier mapped each one, and added change-notice clauses plus a yearly audit that caught 3 unnotified supplier changes in 2025.
- Took the sole control-board microcontroller from allocation to production in 9 months: AS6081 broker program with lab-tested lots, 19-week re-spin, 24-month committed allocation — $148M shipped on schedule vs. $31M at real risk.
- Ran the weekly shortage-allocation meeting with sales, planning and finance for 15 months; rewrote the rules after an $85K penalty.
- Moved ~1,400 passive part numbers from 6 distributors to 2 under a 2-year pricing agreement — $1.24M/yr finance-validated savings.
- Designed and ran 14 monthly S&OP cycles — forecast accuracy 58% → 74%, days of supply 112 → 74, expedite costs $1.12M → $460K — on a hand-built spreadsheet commitment register automated from ERP data and a Power BI dashboard to my spec.
- Lead 2 commodity managers and 3 buyers on cross-functional sourcing projects — matrix leadership, no direct reports.

Mirrowood Electronics Jun 2016 – Apr 2019

Buyer → Senior Buyer (promoted Jan 2018) Chandler, AZ

- Bought PCBs, passives and connectors for 22 customer programs (~$24M/yr, 1,900 part numbers) at a ~$380M contract electronics manufacturer; consolidated bare-board suppliers from 7 to 4 — $610K/yr negotiated savings.
- Analytically root-caused expedite fees and premium freight ($214K → $78K): matched every charge to its purchase order, found MRP releasing orders against stale ERP lead times, and corrected 640 of them with written confirmations.
- Lifted supplier on-time delivery from 81% to 93% through monthly scorecards reviewed with each supplier.

Industrial Engineering Intern — food-packaging plant, Mesa, AZ Summer 2015

SKILLS

Commodity Strategy & Negotiation — Global commodity strategy · RFQ management · Long-term agreements · Quantity-flex terms · Metal index clauses · Change-notice clauses · Cost recovery · Supplier scorecards

Cost & Manufacturing Analytics — Bottom-up should-cost modeling · Total-cost models · Manufacturing cost decomposition · Negotiation walk-away planning

Supplier Risk & Quality — Single-source criticality reviews · Sub-tier supplier mapping · Shortage allocation · AS6081 broker purchasing with counterfeit controls · Supplier audits & probation · First-article inspection

Planning & Systems — S&OP design & facilitation · MRP · ERP & SAP ECC purchasing (info records, source lists, scheduling agreements) · Excel cost & commitment models · Power BI reporting

EDUCATION

BS, Industrial Engineering — Ocotillo State University 2012 – 2016

CPSM — Certified Professional in Supply Management 2021
